UNIT-5

Measurement And Evaluation Of The Benefits Of Innovation For Business (Financial And Nonfinancial Metrics, Their Combination And Choice)

Innovation is a key driver of growth, competitiveness, and long-term sustainability for businesses. However, simply investing in innovation is not enough—organizations must also **measure and evaluate its benefits** to ensure that resources are used effectively and that innovation contributes to strategic goals. Measuring innovation is challenging because its outcomes are often uncertain, long-term, and not always directly quantifiable. Therefore, businesses rely on a mix of **financial and non-financial metrics**, along with integrated evaluation approaches, to assess innovation performance.

1. Importance of Measuring Innovation

Measuring innovation is essential for several reasons:

1. Performance Assessment

It helps organizations evaluate whether innovation activities are achieving desired outcomes.

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

2. Resource Allocation

Measurement ensures that investments in innovation yield returns and helps allocate resources efficiently.

3. Strategic Alignment

It ensures that innovation efforts are aligned with business objectives.

4. Continuous Improvement

Evaluation provides feedback for improving future innovation processes.

5. Risk Management

Helps identify failures early and reduce losses.

2. Challenges in Measuring Innovation

Innovation measurement is complex due to:

- **Intangible outcomes** (e.g., knowledge, creativity)
- **Long-term impact** that may not be immediately visible
- **Uncertainty and risk** associated with new ideas
- **Difficulty in linking cause and effect**

Because of these challenges, organizations must adopt a **balanced approach** using multiple metrics.

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

3. Financial Metrics for Innovation

Financial metrics focus on the **economic impact** of innovation. They are quantitative and widely used for decision-making.

A. Revenue-Based Metrics

1. Revenue from New Products

- Measures income generated from recently introduced products or services.
- Indicates the success of innovation in the market.

2. Percentage of Sales from New Products

- Shows how much of total revenue comes from innovations.
-

B. Profitability Metrics

1. Return on Investment (ROI)

- Measures profitability of innovation investments.

2. Net Present Value (NPV)

- Evaluates future cash flows from innovation projects.

3. Internal Rate of Return (IRR)

- Indicates the efficiency of innovation investments.
-

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

C. Cost-Related Metrics

1. R&D Expenditure

- Tracks investment in research and development.

2. Cost Savings

- Measures reduction in operational costs due to process innovations.
-

D. Market Performance Metrics

1. Market Share Growth

- Indicates competitive advantage gained through innovation.

2. Pricing Power

- Ability to charge premium prices due to innovative offerings.
-

Advantages of Financial Metrics

- Objective and measurable
 - Useful for decision-making
 - Easily comparable
-

Limitations

- Focus on short-term results

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

- Ignore intangible benefits
 - May discourage risky but valuable innovations
-

4. Non-Financial Metrics for Innovation

Non-financial metrics focus on **qualitative and intangible aspects** of innovation.

A. Customer-Based Metrics

1. Customer Satisfaction

- Measures how well innovations meet customer needs.

2. Customer Adoption Rate

- Indicates how quickly customers accept new products.

3. Customer Retention

- Reflects loyalty resulting from innovative offerings.
-

B. Process-Based Metrics

1. Time-to-Market

- Measures the speed of innovation development.

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

2. Number of New Ideas Generated

- Indicates creativity and idea generation capability.

3. Innovation Pipeline Strength

- Tracks the number of projects at different stages.
-

C. Learning and Growth Metrics

1. Employee Skills and Training

- Reflects the organization's ability to innovate.

2. Knowledge Creation

- Measures patents, publications, or new knowledge.

3. Collaboration Levels

- Indicates teamwork and knowledge sharing.
-

D. Strategic Metrics

1. Alignment with Business Goals

- Ensures innovation supports organizational strategy.

2. Brand Reputation

- Reflects perception of the company as innovative.

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

Advantages of Non-Financial Metrics

- Capture intangible benefits
 - Provide early indicators of success
 - Encourage long-term innovation
-

Limitations

- Difficult to quantify
 - Subjective in nature
 - Hard to compare across organizations
-

5. Combining Financial and Non-Financial Metrics

A single type of metric cannot fully capture the value of innovation. Therefore, organizations use a **balanced combination** of financial and non-financial metrics.

Balanced Scorecard Approach

This approach integrates multiple perspectives:

1. **Financial Perspective** – Profitability and returns
2. **Customer Perspective** – Satisfaction and value
3. **Internal Process Perspective** – Efficiency and innovation processes

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

4. Learning and Growth Perspective – Skills and knowledge

Benefits of Combining Metrics

- Provides a **holistic view** of innovation performance
 - Balances short-term and long-term outcomes
 - Reduces reliance on a single measure
 - Improves decision-making
-

Example

A company may evaluate innovation using:

- ROI (financial)
- Customer satisfaction (non-financial)
- Time-to-market (process metric)

This combination ensures a comprehensive evaluation.

6. Choosing the Right Metrics

Selecting appropriate metrics depends on several factors:

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

1. Organizational Objectives

- Growth-focused firms may emphasize revenue metrics
 - Customer-focused firms may prioritize satisfaction metrics
-

2. Type of Innovation

Incremental Innovation

- Focus on cost savings and efficiency

Radical Innovation

- Focus on long-term impact and market creation
-

3. Industry Characteristics

- Technology-driven industries rely more on R&D metrics
 - Service industries emphasize customer experience
-

4. Stage of Innovation Process

Early Stage

- Idea generation metrics
- Learning and experimentation

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

Development Stage

- Time-to-market
- Prototype success rate

Commercialization Stage

- Revenue and profitability
-

5. Availability of Data

- Metrics should be practical and measurable
-

7. Framework for Innovation Measurement

Organizations can follow a structured framework:

Step 1: Define Objectives

- Identify goals of innovation

Step 2: Select Metrics

- Choose relevant financial and non-financial metrics

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

Step 3: Collect Data

- Gather accurate and reliable information

Step 4: Analyze Performance

- Compare results with targets

Step 5: Take Action

- Improve processes based on findings
-

8. Benefits of Effective Innovation Measurement

- Better decision-making
 - Improved efficiency
 - Enhanced competitiveness
 - Increased return on investment
 - Continuous improvement
-

9. Challenges in Combining Metrics

- Balancing qualitative and quantitative data
 - Avoiding information overload
 - Ensuring consistency
 - Aligning metrics with strategy
-

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

10. Future Trends in Innovation Measurement

- Use of **data analytics and AI**
- Real-time performance tracking
- Greater emphasis on sustainability metrics
- Integration of digital tools

Barriers To Innovation In Business, Innovation Failure And Its Causes

Innovation is essential for business growth, competitiveness, and long-term sustainability. However, despite its importance, many organizations struggle to innovate effectively. Even when innovative ideas are generated, they often fail during development or implementation. Understanding the **barriers to innovation** and the **causes of innovation failure** is crucial for organizations to overcome challenges and improve their innovation outcomes.

This essay explores the major barriers to innovation in business, the reasons why innovations fail, and how organizations can address these issues.

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

1. Meaning of Innovation Barriers

Barriers to innovation are **obstacles that hinder the generation, development, or implementation of new ideas**. These barriers can arise from internal organizational factors or external environmental conditions.

2. Types of Barriers to Innovation

Barriers to innovation can be broadly classified into **internal barriers** and **external barriers**.

A. Internal Barriers

1. Organizational Culture

A rigid or conservative culture can discourage creativity and experimentation.

- Fear of failure
- Resistance to change
- Lack of support for new ideas

Impact

Employees may hesitate to propose innovative ideas, leading to stagnation.

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

2. Lack of Leadership Support

Innovation requires strong leadership to guide and support initiatives.

- Absence of vision
- Lack of commitment from top management
- Poor communication

Impact

Innovation efforts may lack direction and resources.

3. Resource Constraints

Innovation often requires significant investment in:

- Time
- Money
- Skilled personnel

Impact

Limited resources restrict the ability to develop and implement innovations.

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

4. Poor Knowledge Management

Lack of effective systems for sharing and managing knowledge can hinder innovation.

- Information silos
 - Lack of collaboration
 - Inefficient communication
-

5. Bureaucracy and Rigid Processes

Excessive rules and procedures can slow down innovation.

- Delayed decision-making
 - Limited flexibility
 - Reduced responsiveness
-

6. Lack of Skills and Expertise

Innovation requires specialized skills and creativity.

- Insufficient training
 - Lack of technical knowledge
 - Limited experience
-

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

B. External Barriers

1. Market Uncertainty

Uncertain customer preferences and demand make innovation risky.

- Changing trends
 - Unpredictable behavior
-

2. Technological Challenges

Rapid technological changes can create difficulties in adopting new technologies.

3. Regulatory Constraints

Government policies and regulations may limit innovation.

- Compliance requirements
 - Legal restrictions
-

4. Competitive Pressure

Intense competition may discourage risk-taking.

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

5. Economic Conditions

Economic instability can reduce investment in innovation.

3. Innovation Failure: Meaning

Innovation failure occurs when an innovation **does not achieve its intended objectives**, such as market success, profitability, or user acceptance.

Failure is a natural part of the innovation process, but repeated failures can be costly for organizations.

4. Causes of Innovation Failure

1. Lack of Market Understanding

One of the most common causes of failure is not understanding customer needs.

- Poor market research
- Ignoring customer feedback

Result

Products may fail to attract customers.

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

2. Weak Value Proposition

If the innovation does not offer clear value, it may not succeed.

- No unique benefits
 - Poor differentiation
-

3. Poor Execution

Even good ideas can fail due to poor implementation.

- Ineffective project management
 - Lack of coordination
-

4. Insufficient Resources

Lack of funding, time, or talent can lead to incomplete or poor-quality innovations.

5. Technological Issues

- Technical failures
 - Compatibility problems
 - Poor product performance
-

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

6. Resistance to Change

Employees or customers may resist adopting new innovations.

7. Lack of Strategic Alignment

Innovation efforts may not align with organizational goals.

8. Timing Issues

- Launching too early or too late
 - Entering the market at the wrong time
-

9. Poor Risk Management

Failure to anticipate and manage risks can lead to failure.

10. Ineffective Marketing

Even good innovations need proper promotion and positioning.

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

5. Examples of Innovation Failure (Generalized)

- Products that failed due to lack of demand
 - Technologies that were too complex for users
 - Innovations that were ahead of their time
-

6. Relationship Between Barriers and Failure

Barriers to innovation often lead to innovation failure. For example:

- Lack of leadership → Poor execution
- Resource constraints → Incomplete development
- Market uncertainty → Wrong product design

Understanding this relationship helps organizations address root causes.

7. Strategies to Overcome Barriers and Reduce Failure

1. Building an Innovative Culture

- Encourage creativity and experimentation
 - Accept failure as part of learning
-

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

2. Strong Leadership

- Provide vision and direction
 - Support innovation initiatives
-

3. Effective Resource Allocation

- Invest in R&D
 - Provide necessary tools and training
-

4. Enhancing Collaboration

- Break down silos
 - Promote teamwork
-

5. Market Research and Customer Involvement

- Understand customer needs
 - Use feedback in development
-

6. Agile Approach

- Adopt flexible and iterative processes
 - Continuously improve based on feedback
-

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

7. Risk Management

- Identify potential risks
 - Develop mitigation strategies
-

8. Continuous Learning

- Learn from failures
 - Improve processes
-

8. Importance of Managing Innovation Barriers and Failures

- Improves success rate of innovation
- Reduces costs and risks
- Enhances competitiveness
- Promotes sustainable growth

Post-Audits Of Innovative Projects

Innovation is inherently uncertain and risky, yet it is essential for organizational growth and competitiveness. While much attention is given to idea generation, development, and implementation, an equally important stage is often overlooked—the **post-audit** of innovative projects. Post-audits involve a systematic evaluation of innovation

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

projects after their completion to assess performance, outcomes, and lessons learned. This process plays a critical role in improving future innovation efforts, ensuring accountability, and maximizing value creation.

1. Meaning of Post-Audit in Innovation

A **post-audit** (also known as a post-implementation review) is a structured assessment conducted after the completion of an innovation project. It evaluates:

- Whether the project achieved its objectives
- The efficiency of the processes used
- The outcomes and benefits generated
- The lessons learned for future improvements

Unlike ongoing monitoring, post-audits focus on **retrospective analysis**, providing insights into both successes and failures.

2. Importance of Post-Audits in Innovative Projects

Post-audits are essential for effective innovation management for several reasons:

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

1. Learning and Improvement

They help organizations understand what worked and what did not, enabling continuous improvement.

2. Accountability

Ensure that resources (time, money, effort) were used effectively.

3. Performance Evaluation

Assess whether the innovation met its intended goals and delivered expected value.

4. Knowledge Sharing

Document lessons learned and share them across the organization.

5. Risk Reduction

Identify risks and challenges encountered to avoid similar issues in future projects.

3. Objectives of Post-Audits

The main objectives include:

- Evaluating **project success or failure**
- Comparing actual results with planned targets
- Identifying **deviations and their causes**

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

- Assessing **financial and non-financial outcomes**
 - Improving future **decision-making and planning**
-

4. Scope of Post-Audit

A comprehensive post-audit covers multiple dimensions:

A. Financial Performance

- Cost vs. budget
- Return on investment (ROI)
- Revenue generated

B. Technical Performance

- Quality of the innovation
- Technical feasibility
- Performance reliability

C. Market Performance

- Customer acceptance
- Market share
- Competitive position

D. Process Evaluation

- Efficiency of development processes
- Time-to-market
- Resource utilization

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

E. Organizational Impact

- Effect on employees and culture
 - Knowledge gained
 - Capability development
-

5. Process of Conducting Post-Audits

A systematic approach ensures effective post-audits:

Step 1: Define Objectives and Criteria

- Establish what aspects will be evaluated
 - Set benchmarks and performance indicators
-

Step 2: Data Collection

- Gather quantitative and qualitative data
 - Sources include financial reports, customer feedback, and team insights
-

Step 3: Performance Analysis

- Compare actual outcomes with planned objectives
- Identify gaps and deviations

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

Step 4: Identify Causes

- Analyze reasons for success or failure
 - Consider internal and external factors
-

Step 5: Document Findings

- Record key insights, lessons learned, and recommendations
-

Step 6: Feedback and Implementation

- Share findings with stakeholders
 - Apply lessons to future projects
-

6. Tools and Techniques Used in Post-Audits

1. Variance Analysis

- Compares planned vs. actual performance

2. Cost-Benefit Analysis

- Evaluates financial returns

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

3. Balanced Scorecard

- Assesses financial and non-financial performance

4. Surveys and Interviews

- Collect feedback from stakeholders

5. Benchmarking

- Compare performance with industry standards

7. Benefits of Post-Audits

1. Improved Decision-Making

Provides insights for better strategic decisions.

2. Enhanced Innovation Capability

Builds organizational learning and expertise.

3. Increased Efficiency

Identifies inefficiencies and areas for improvement.

4. Better Resource Utilization

Ensures optimal use of resources in future projects.

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

5. Higher Success Rate

Reduces chances of repeating mistakes.

8. Challenges in Conducting Post-Audits

1. Resistance to Evaluation

Employees may fear criticism or blame.

2. Lack of Data

Incomplete or inaccurate data can affect analysis.

3. Time Constraints

Organizations may prioritize new projects over evaluation.

4. Bias and Subjectivity

Personal opinions may influence findings.

5. Difficulty in Measuring Intangible Outcomes

Benefits like learning and brand value are hard to quantify.

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

9. Strategies for Effective Post-Audits

1. Create a Learning Culture

Encourage openness and view audits as learning opportunities.

2. Ensure Objectivity

Use standardized criteria and involve independent evaluators.

3. Involve Stakeholders

Include team members, customers, and management.

4. Use Multiple Metrics

Combine financial and non-financial indicators.

5. Document and Share Knowledge

Maintain records and share insights across the organization.

10. Role of Post-Audits in Innovation Management

Post-audits play a vital role in the innovation lifecycle:

- **Closing the innovation loop** by linking outcomes to inputs
- Supporting **continuous improvement**
- Enhancing **organizational learning**

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

- Strengthening **future innovation strategies**

They transform innovation from a trial-and-error process into a **systematic and knowledge-driven activity**.

Organization And Facilitation Of An Innovation Workshop.

Innovation workshops are structured, collaborative sessions designed to generate ideas, solve problems, and develop innovative solutions. In today's fast-changing business environment, organizations use innovation workshops to harness creativity, encourage teamwork, and accelerate the innovation process. Effective organization and facilitation of such workshops are essential to ensure meaningful outcomes and actionable results.

This essay explains the concept, objectives, planning, facilitation techniques, and success factors of innovation workshops.

1. Meaning of Innovation Workshop

An **innovation workshop** is a planned session where participants come together to explore ideas, identify opportunities, and develop creative solutions to specific challenges. It involves structured activities, tools, and techniques to stimulate creativity and collaboration.

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

2. Objectives of an Innovation Workshop

Innovation workshops are conducted with several key objectives:

- Generate **new ideas and solutions**
 - Solve specific business problems
 - Encourage **creative thinking**
 - Foster collaboration and teamwork
 - Identify new opportunities for growth
 - Develop prototypes or action plans
-

3. Importance of Innovation Workshops

Innovation workshops play a crucial role in organizations because they:

- Bring together diverse perspectives
 - Accelerate the innovation process
 - Improve problem-solving capabilities
 - Enhance employee engagement
 - Promote a culture of innovation
-

4. Types of Innovation Workshops

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

1. Idea Generation Workshops

Focus on brainstorming and generating new ideas.

2. Problem-Solving Workshops

Address specific challenges or issues.

3. Design Thinking Workshops

Use user-centered approaches to develop solutions.

4. Strategy Workshops

Focus on long-term innovation planning.

5. Prototyping Workshops

Develop and test models of ideas.

5. Planning an Innovation Workshop

Effective organization begins with careful planning.

A. Define Objectives

- Clearly identify the purpose of the workshop
- Set measurable goals

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

B. Identify Participants

- Include diverse participants (employees, customers, experts)
 - Ensure a mix of skills and perspectives
-

C. Select Venue and Tools

- Choose a suitable environment (physical or virtual)
 - Arrange materials such as whiteboards, sticky notes, and digital tools
-

D. Develop Agenda

- Plan activities and time allocation
 - Include breaks and interactive sessions
-

E. Prepare Resources

- Gather relevant data and information
 - Provide background materials to participants
-

6. Structure of an Innovation Workshop

A typical innovation workshop follows a structured flow:

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY

Department of Computer Science & Engineering

SUBJECT-MANAGING INNOVATION & ENTREPREURSHIP

UNIT-5

1. Introduction

- Welcome participants
 - Explain objectives and agenda
 - Set expectations
-

2. Problem Definition

- Clearly define the challenge
 - Ensure all participants understand the problem
-

3. Idea Generation

- Use creative techniques such as brainstorming or mind mapping
-

4. Idea Evaluation

- Assess ideas based on feasibility, impact, and relevance
-

5. Development and Prototyping

- Refine selected ideas
 - Create models or prototypes
-

BANSAL INSTITUTE OF SCIENCE AND TECHNOLOGY
